

Report

20 Nov 2021

Patient Summary:

Full Name: Quentin Beck

DoB: 01/06/1964

Address: 20 Ingram Street, London, W1K 1QA

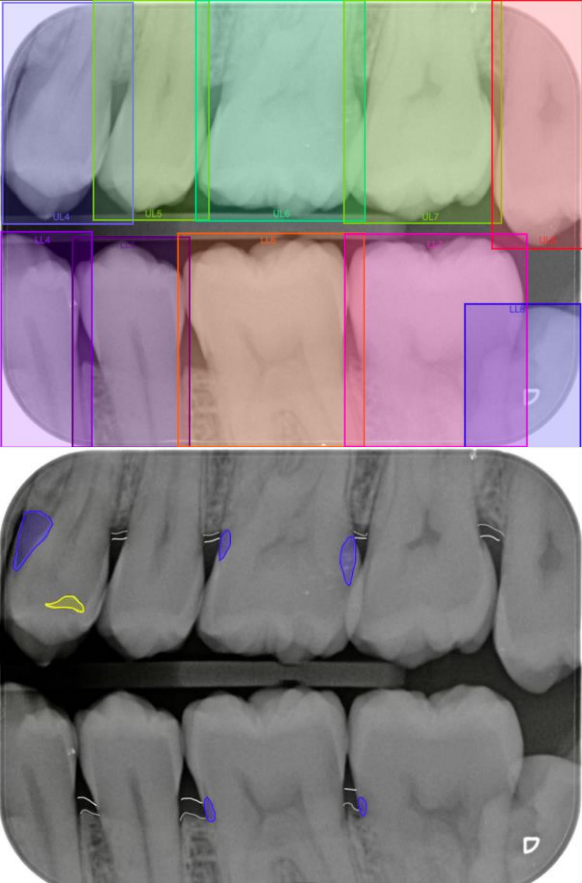

Telephone: 07907907907

Radiograph Analysis

Analysis Completed

1. Tooth Identification
2. Natural Anatomy Analysis
3. Foreign Structures Analysis
4. Diagnosis Analysis
 1. Caries (Decay) Analysis
 2. Bone Loss Analysis

Analysis Summary

Tooth Number	Natural structures identified	Foreign structures Identified	Pathology Identified/ Notes
UL4	E,D,P		Caries, Cervical burnout
UL5	E,D,P,CEJ		
UL6	E,D,P,CEJ		Cervical burnout
UL7	E,D,P,CEJ		
UL8	E,D,P,CEJ		Over erupted
LL4	E,D,P,CEJ		
LL5	E,D,P,CEJ		
LL6	E,D,P,CEJ		Cervical burnout
LL7	E,D,P,CEJ		Cervical burnout
LL8	E		Horizontal impaction
Image	 <p>The image is a composite dental radiograph. The top section shows a panoramic view of the upper teeth (UL4-UL8) with colored overlays: UL4 is green, UL5 is yellow, UL6 is green, UL7 is green, and UL8 is red. The bottom section shows a panoramic view of the lower teeth (LL4-LL8) with colored overlays: LL4 is purple, LL5 is orange, LL6 is pink, LL7 is pink, and LL8 is purple. Annotations include blue and yellow outlines on the lower teeth, indicating specific areas of interest or pathology.</p>		

Caries (Decay) Report

Patient Risk factors:

Medical History: Diabetic,

Diet: Average Sugar Frequency

0% restored teeth on image (historical risk) [Fillings: Unrestored teeth]

Tooth Number	Position on Tooth	Advancement Level	Indicators	Uncertainties	Confidence %
UL6	Occlusal	Dentine	Irregular shaped radiolucency. Average sugar frequency reported. Diabetic.	Check additional views if available! Visual assessment. 0% image restoration rate.	21%
Image					

Caries Risk

Tooth Number	Position on Tooth	Indicators	Uncertainties
UL7	Distal	Impacted LL8 Poor access. Average sugar frequency reported	Overlap of image
Image			

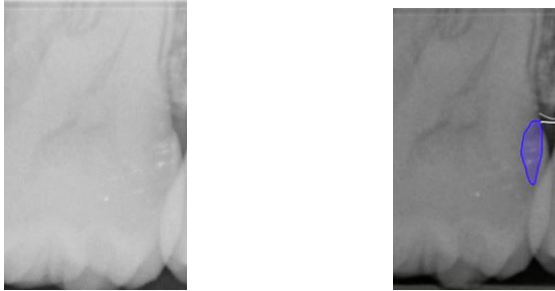

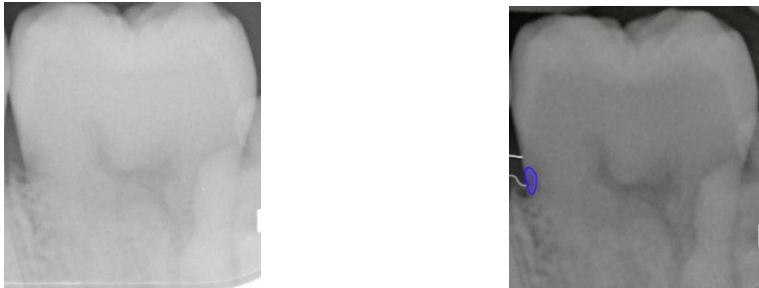

Uncertainty / Possible Caries

Caries risk:

0% restored rate on image (Restored teeth: Unrestored teeth)

10% caries identified on image (Caries teeth: Non-caries teeth)

Analysis: Low risk for caries.

Tooth Number	Observation	Reason	Position on Tooth	Possibility	Suggestion
UL6	Cervical burnout	Enamel at knife edge at CEJ intact. Close to alveolar crest.	Distal	Caries. Low Risk. 0% image restoration rate. Daily interdental cleaning reported.	Clinical investigation
Image					
LL7	Cervical burnout	Enamel at knife edge at CEJ intact. Close to alveolar crest.	Mesial	Caries. Low Risk. 0% image restoration rate. Daily interdental cleaning reported.	Clinical investigation
Image					

Bone-loss Report

Diagnosis: Good Crestal levels - Within accepted norms

Patient Risk Factors:

SH: Non-Smoker

MH: Nil

OH regime: ETBx2, Daily floss

Number of Teeth identified on Xray	CEJ reference points identified	Current bone level tracing confidence %	Impediments identified	Confidence % in diagnosis
10	16	97%	Overlapping teeth	97%
